

**Bundesverband Solarwirtschaft e.V.**  
Office for rural electrification

## Goals • Activities • Services

### Our Goals

With over 650 members, we are the lobby group of the German solar energy industry. BSW-Solar acts as informant and intermediary between the business political and public sector. The BSW-Solar Office for rural electrification strives to optimise conditions for the members in the international competition of projects for rural electrification.

### Our Activities

#### Information

We ease market access through specific information among our member companies. Through our office we distribute news about foreign markets, tenders and activities in the field of solar technology and rural electrification in the emerging markets.

#### Lobbying

The Industry Association represents the interest of its members against the relevant federal ministries and development aid organisations.

#### Projects

We establish mutual business encounters between our member companies and local partners. We represent the German solar industry on trade fairs and events worldwide and support local organisations to build markets for renewable energy systems.

### Our Services

German companies have excellent products and services to offer to these markets. They are based on many years of development, sound know-how and practical experience. If you require an off-grid power supply solution anywhere in the world, please contact us.
